HELMET ACCESSORIES

COMPLETE INTEGRATION

Our products offer maximum flexibility and compatibility and are designed to integrate seamlessly with our partners or third-party components.

PICATINNY RAIL

- Plastic part that is strong and lightweight
- Transform helmets into streamlined platforms capable of integrating mission-enhancing components and accessories such as visors, mandibles, lights and cameras
- One size fits all
- Easily mounts to the sides of the helmet
- Mounts using existing chinstrap holes in the helmet
- Picatinny quickly attaches or releases from the rail system

INNER LINER

The inner liner is equipped with comfort pads installed. You can use a combination of pad thicknesses to achieve the best comfort and fit.

- Made of antibacterial material
- Filled with memory foam
- Comfortable on the head
- No sweat

HELMET SHROUD

Equipped with built-in rubber bumpers and precision machined aerospace aluminum inserts, this ensures a secure and stable connection with standard mounts. Its three-hole design accommodates most helmets, featuring a standard drill pattern. Additionally, it includes mounting points for bungee cords and lanyards.

CHINSTRAP RETENTION SYSTEM

The Delta Dial Harness uses 3D Spacer fabric for airflow and comfort. Its durable yet soft webbing ensures lasting comfort. Featuring lockable sliding quick-clips for one-handed adjustments, it secures firmly. The lightweight system evenly spreads pressure. Straps and chin cup offer a comfy fit in various conditions. The side-release buckle allows easy helmet removal.

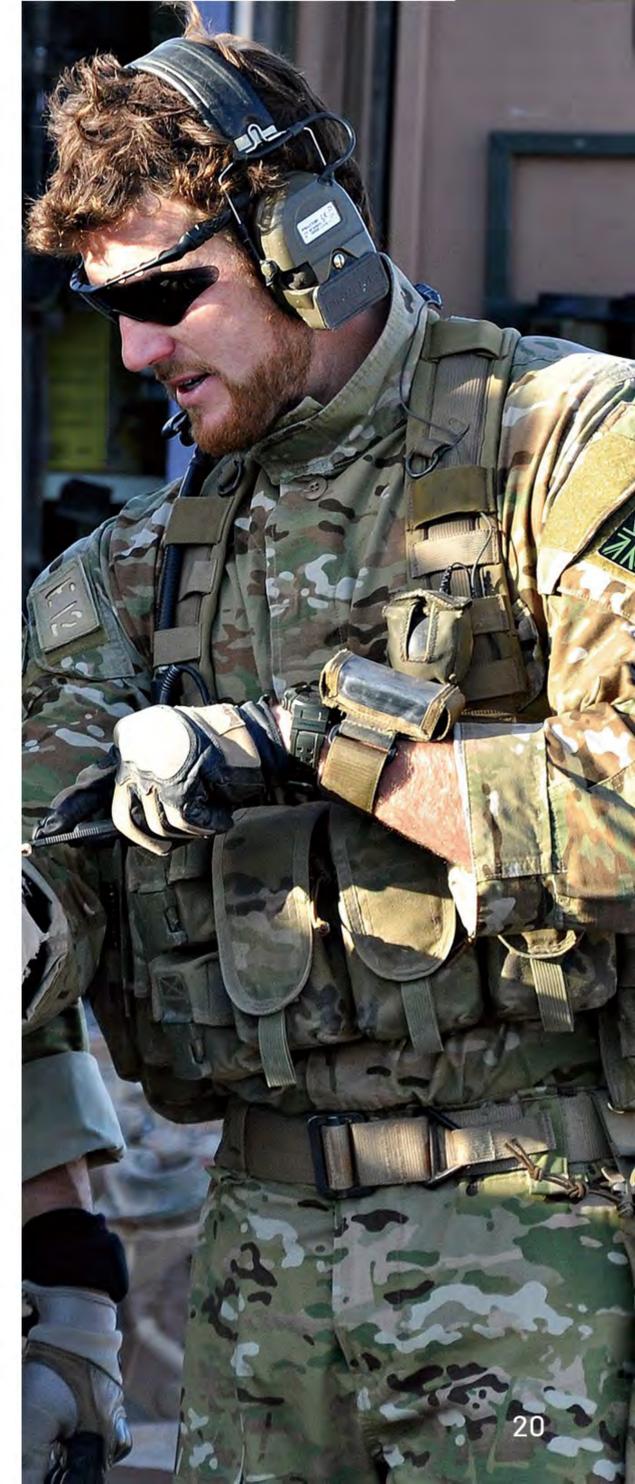

TACTICAL HELMET BAG

The helmet bag is composed of durable, water resistant 1000D Polyester with a drawstring opening and a personalized tag. Covered with a MOLLE system for adjusting all necessary additional equipment.

TACTICAL HEADSET

Experience ultimate shooting comfort with our tactical helmet headset. Electronic noise-canceling, soft gel padding, ARC rail adapter—enhance your shooting experience. Control noise levels, communicate seamlessly. Compatible with FAST, ACH, MICH helmets. Get superior protection and clear communication in any environment.

NIGHT VISION DEVICE

This is a binocular night vision device that can be mounted on the head and is lightweight and easy to carry. It uses a high-performance Generation 2+ image intensifier, which provides clear and undistorted images. The device has a compact size, a large field of view, and can be adjusted according to the user's needs. When not in use, it can be flipped onto the helmet and will automatically shut down to prevent any light from being emitted by the eyepiece. Users can also quickly switch to single-eye viewing mode by flipping up one of the lens tubes.

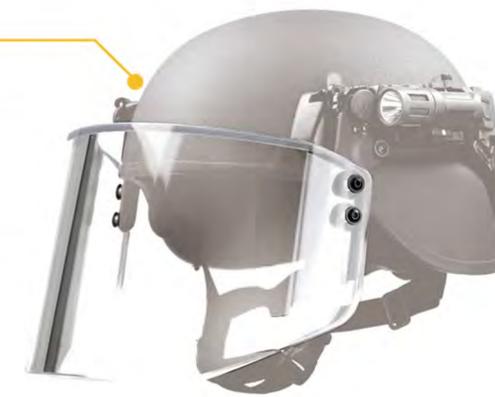

SINGLE TUBE HEAD MOUNTED NIGHT VISION DEVICE

This monocular night vision device features a lightweight, portable design, contrasting favorably with binocular night vision goggles for enhanced portability and ease of use. Ideal for head-mounted applications, it employs a high-performance Quasi third-generation image intensifier, ensuring sharp, distortion-free imagery. Its compact build and generous field of view enable effortless user adjustment. Moreover, its intelligent design includes an automatic shutdown feature upon helmet flipping, preventing unintended light emission.

BALLISTIC VISOR FOR HELMET

- Material: 22mm thick poly-carbonate, weight only 3 lbs / 1.35 kg
- Protection: NIJ level IIIA-rated ballistic visor for the tactical helmet
- Fragments protection: High protection against fragments (stanag 2920 ed.2)
- Rail system: Will work with any standard rail system
- Easy and competitive visor design

BULLETPROOF OPS-CORE FAST® BALLISTIC HELMET MANDIBLE

- Increased blunt impact and ballistic protection
- Lightweight design easily attaches to SHC ARC Shim
- Flexible Armor provides the ability to obtain a solid cheek weld
- Uninterrupted Field of View
- Compatible with any Ops-Core FAST Helmet equipped with the Super High-Cut Skeleton ARC
- Rails and Super High-Cut Skeleton ARC Shim
- SHC Skeleton Rails and SHC ARC Shims available as upgrade kits to any Ops-Core FAST Helmet
- One Size Fits All

LEVEL IIIA

BPP-001

LEVEL OF PROTECTION IIIA

Level IIIA plates are made of high-performance soft materials like polyethylene or ceramic-fiber composites. They effectively resist direct impacts from handgun rounds, including .44 Magnum or 9mm. They are typically lighter and more flexible compared to higher-level hard plates, providing comfort and flexibility.

LEVEL III

BPP-002

LEVEL OF PROTECTION III

Level III ballistic plates are typically made of durable materials like ballistic ceramic and polyethylene. They possess the ability to resist various rifle bullets, such as 7.62mm NATO rounds or 5.56mm projectiles. While they tend to be relatively heavy, they offer advanced protective capabilities.

LEVEL IV BPP-003

LEVEL OF PROTECTION IV

Level IV plates often use high-density ceramics like boron carbide or ceramic materials in conjunction with composite fibers. They resist high-velocity rifle bullets such as 7.62mm rounds or 7.62x39mm bullets from rifles like the AK-47. They are heavier, thicker, and harder compared to lower-level plates, offering superior protection.
